1. Introduction

Certificates of Origin certifies that goods in a shipment are wholly obtained, produced, manufactured, or processed in a particular country. Local chambers have the unique position to operate as the natural and trusted agent in issuing CoOs, which can issue two types:

(a) Preferential - Derived from reciprocal Regional Trade Agreements (RTAs) or non-reciprocal Preferential Trade Agreements (PTAs), they grant preferential/duty-free treatment to qualifying goods.

The rules of origin are negotiated as part of an FTA and are different under each FTA. A tariff preference will only be granted by the importing country only if below mentioned all requirements are met: -

i. Meet the minimum Rules of Origin set under each specific trade agreement.
ii. Provide a certificate of origin (or statement) in specific formats prescribed under each trade preference.

iii. Transport directly (or "consign") to their destination market or demonstrate that they have not been altered during transit.

(b) Non-Preferential - Derived from the trade partner Country's national legislation and is used to implement trade remedies and other trade restrictions when MFN duties are applied. Non-Preferential CoOs do not provide any tariff preference.

To ensure seamless adoption of Certificate of Origin and promote broader interoperability, an Open API Integration framework is required. This will allow agency systems to integrate with Certificate of Origin.

The proposed API framework will define standard data flows and data structure covering essential fields such as certificate details, export item details, shipment details, supporting document. By enabling API-based connectivity, Certificate of Origin will significantly improve usage, eliminate duplicate data entry, enhance accuracy, and create a unified digital ecosystem for exporters, agencies, regulatory authorities.

1.1 Scope

The purpose of this document is to provide the details of the integration between DGFT and Certificate of Origin.

Abbreviation	Expanded Form
DGFT	Directorate General of Foreign Trade
IEC	Importer Exporter Certificate
Gol	Government of India
PGA	Participating Government Agencies
COO	Certificate of Origin

2. API Process

Pre- Requisites:

1. AGENCY system shall have document signer with digitally signing the payload before transmission to DGFT.
2. Public IP of AGENCY shall be enabled at DGFT gateway.

Following steps will be followed for integration with DGFT system:

1. AGENCY will be provided with x-api-key, unique userID, password and DGFT public key at time of onboarding.
2. AGENCY requested to provide public IP from where API will be called in DGFT. All the API call from these public IP will be only allowed in DGFT system.
3. AGENCY shall append 32 bytes dynamic salt to password before hashing using PBKDF2 encryption with iteration count of 65536 and key length shall be 256. String representation of dynamic salt byte appended with encrypted hash byte will be passed as password.
4. AGENCY system will generate token by passing x-api-key, userID (received in Step 1) and PBKDF2 dynamic salted password generated in step3 to generateAuthToken API. DGFT system will validate the userID, password and IP post success validation system will share the accessToken.
5. AccessToken generated in step 4 is having expiration timeout of 60 minutes. AGENCY can cache the token and reuse it for 60 minutes.
6. COO FILE API -Agency will share the data in standard format and in response receive the certificate and data.
7. COO Verify API-To validate whether the Certificate issued through Certificate of Origin is authentic

3. API Details

The following APIs will be involved in integration.

#	API Name	Hosted By	Remarks
1.	generateAuthToken	DGFT	userID and Hashed Password shall be passed to generateAuthToken
2	COO File API	DGFT	Agency will share the data in standard format and in response receive the Certified and data.
5	COO Verify API	DGFT	To validate whether the Certificate issued through Certificate of Origin is authentic and the Certified Certificate pdfs contains Unique Certificate no., QR Code, Certified PDF.

4. Security

The channel to exchange request and response messages should be secured to maintain and ensure confidentiality. The security shall be implemented at the network and application level. The application security can be explained as follows:

- **HTTPS:**

The communication between the API shall take place a secure https layer SSL protocol. This way communication will happen through a secure encrypted connection.

- **IP Whitelisting:**

DGFT system will whitelist the IP of the external system to access the API and external system will require to enable the API domain of the DGFT in their environment.

- **Authentication Parameter in the header of the request:**

DGFT will share API key, user Id and password to each external integration system after enablement of the public IP in the DGFT firewall. External system will need to pass the API key in the header of the generateAuthToken along with user Id and encrypted password to generate token. Password shall be salted with random 32 bytes using SHA256 and encrypted with PBKDF2 having key size of 256 iterations 65536. Auth token is then required to be passed along with userId in header to access the other API. Please refer the below section for generation of password.

```
byte[] salt = //32 bytes salt
PBEKeySpec spec = new PBEKeySpec(password.toCharArray(), salt, 65536, 256);
SecretKeyFactory factory;

factory = SecretKeyFactory.getInstance("PBKDF2WithHmacSHA256");
byte[] hash = factory.generateSecret(spec).getEncoded();

ByteArrayOutputStream outputStream=new ByteArrayOutputStream();
outputStream.write(salt);
outputStream.write(hash);
return DatatypeConverter.printBase64Binary(outputStream.toByteArray());
```

- **Encrypted Request Body**

AGENCY is required to share query data in base 64 encoded and AES 256 encrypted format using dynamic 32 bytes secret key. This secret key encrypted using DGFT public certificate using RSA algorithm shall be shared along with payload in header. DGFT system will decrypt the header using DGFT private key to get the secret key and will use this secret key to decrypt the payload.

- **Digitally signed message body:**

All the response provided by the DGFT will be digitally signed using the private key of digital signature. Message body will contain the digital signature at the end of the with message signature tag. Public key shall be shared between the DGFT and External system for verifying the sign. This will ensure the 2nd level of application

authentication. The public key of DGFT will keep updating time to time and is requested for system to keep provision for that.

4.1 Encryption Steps

Following are the steps to be followed for encrypting the message:

- **Step 1:** Create message in the JSON format as per the specs finalized.
- **Step 2:** Encode the JSON message using Base 64 encoding.

Base64.getEncoder().encode(JSONMessageBody.getBytes())

- **Step 3:** Generate a 32 characters plain text dynamic key (do not use Key generator function for generation of secret key), which will be used for encrypting the plain payload. AGENCYs shall use keyboard characters to generate the secret key.
- **Step 4:** Encrypt the message generated in step 2 using AES 256 bit key and 12 bytes random IV. AES 256 bits key is generated by salting secret key generated in step 3 with 32 bytes character i.e. salt using SHA256.
- **Step 5:** Digitally sign the message generated in step 2 using private key provided at time of onboarding using RSA algorithm hashed using SHA256 will constitute sign attribute. Encode the message received in step 4 and set it as data. Final message body will be as:
{ "data": "Encode the (12 bytes IV+32 bytes salt + encrypted message generated in step 4) ",
"sign": "Generated Hash of message in step 3 using private key of digital sign" }
- **Step 6:** Encrypt the secret key generated in step 1 with the help of shared DGFT Public key using RSA algorithm. The generated value needs to be passed in request header parameter **secretVal**.
- **Step 7:** Pass the message generated in step 4 adding the header **secretVal** , **accessToken** and **userID**.*
- **Step 8:** Digitally signed response shall be provided in the same format as that of the request. It will also consist of same header parameters as that of request and digitally signed response body.

4.2 Decryption Steps

Following steps need to be performed for decrypting the message:

- **Step 1:** DGFT will validate the request received and decrypt the **secretVal** received in header with RSA algorithm using DGFT private key to get the secret key (AES Key).
- **Step 2:** DGFT will then decrypt the data using the secret key obtained from decryption of secretVal in step 1.

- **Step 3:** DGFT will verify the digital signature in request using the decrypted JSON payload using the public key of AGENCY shared earlier.
- **Step 4:** Post successful digital verification and decryption DGFT will share the encrypted response using the same secret key received in payload. AGENCY will need to decrypt the data using the same secret key and mechanism followed for encryption.

This step of decrypting the message will be followed for both request and response.

4.3 Algorithm Specification

Password Encryption using PBKDF2:

- Hashing: SHA256
- Key length: 256
- Iteration: 65536

Advanced Encryption Standard (AES) for Payload Encryption.

- Cipher Mode Operation: Galois/Counter Mode (GCM) with No Padding
- Cryptographic Key: 256 bits
- IVector: First 12 bytes of cryptographic key (Secret Key)
- GCM Tag Length: 16 Bytes

Rivest-Shamir-Adleman (RSA) for AES Key Encryption.

- Cipher Mode Operation: Electronic Codebook (ECB) with OAEP padding hashed with SHA 256 and MFG1(RSA/ECB/OAEPWithSHA-256AndMGF1Padding).
- Cryptographic Key: 2048 bit X509 Certificate

SHA256-Rivest-Shamir-Adleman (RSA) for Digital Signature.

- Hashing Algorithm: SHA 256
- Cryptographic Key: 2048 bit X509 Certificate

5. Field Specifications

5.1 Final Certificate API

Agency will share the data in standard format and in response receive the Certified Certificate pdfs.

Agreement Wise Field Structure

In Certificate of Origin, we have three types of Agreement:

1. **Non-Preferential CoO**
2. **Preferential CoO**
3. **Other**
 1. **[Non-Preferential CoO]**

5.1.1 Certificate-Tab-Details

Purpose: This tab captures the details of certificate information of the applicant.

Mandatory Fields

- Type of Certificate of Origin {typeCertiOrigin}
- Trade Agreement/ Others {tradeAgreement}
- Type of Request {typeRequest}
- Issuing Agency {issuingAgency}
- Regional Office {regionalOffice}
- Issuing Office {issuingOffice}

Optional Fields

- Is the item is manufactured under cumulation? Yes/NO
- The items are being exported for exhibition? Yes/NO

Mandatory Fields Dependencies

- Trade Agreement/ Others values depend on the selected Type of Certificate of Origin
- Type of Request values depends on the selection of Trade Agreement/Others
- Regional Office values depend on the selection of Issuing Agency
- Issuing Office values depends on the selection of Regional Office
- Type of Certificate of Origin
Mandatory field.
- Values are populated based on the selected Trade Agreement/Others.
- User must select Type of certificate of Origin from the available drop-down list.

Trade Agreement/Others

Mandatory field

- Values are populated based on the selected Type of Request
- User must select Trade Agreement/Others from the available drop down list.

Issuing Agency

Mandatory field

- Values are populated based on the selected Regional Office
- User must select Issuing Agency from the available drop down list.

Regional Office

Mandatory field

- Values are populated based on the selected Issuing office.
- Users must select Regional Office from the drop-down list.

Note: Each Issuing Agency is associated with one or more Regional Offices. The list of available Regional Offices depends on the selected Issuing Agency. Similarly, each Regional Office is associated with one or more Issuing Offices, and the list of available Issuing Offices depends on the selected Regional Office.

5.1.2 Importer-Details-Tab:

Purpose: This tab captures the details of importer information of the applicant.

Mandatory Fields

- Firm Name - Mandatory field. Users must enter the name of the firm. {importerFirmName}
- Country - Mandatory field. Users must select a country from the dropdown list. [Reference Master Table]{importerCountry}
- Address - Mandatory field. Users must enter the firm's complete address. {importerAddress}

Optional Fields

- Importer Email ID – Optional field. Users may enter a valid email address. If provided, the email address must be in a valid format. {importerEmail}

5.1.3 Invoice Details Tab:

Purpose: This tab captures the details of invoice information of the applicant.

Mandatory Fields

- Invoice Number - Mandatory field. Users must enter the Invoice Number {invoiceNumber}
- Invoice Date - Mandatory field. Users must enter the Invoice Date {invoiceDate}

6. API Message Structure

API message input/output will consist of two parts:

- Header
- Message Body

Header is mandatory for request message structure; response message structure will not have any header parameters.

Message body format has JSON format as input and output response.

6.1 generateAuthToken API

UAT URL: <https://api.dgft.gov.in/dgftauth/generateAuthToken>

Production URL: <https://apiservices.dgft.gov.in/dgftauth/generateAuthToken>

Method Type: **post**

6.1.1 Header Parameters

Following are the header parameters that are required to be sent mandatorily in the request body:

"Content-Type": "application/json"

"x-api-key": "Xj7wusx9Dc1M0a629apPY1mHIfRNSxs3a1lrfrAV"

Note: X-api-key will be shared by the DGFT environment separately for Production and Non-Production environment.

6.1.2 Request Data from AGENCY system
